

STEP 1 : Create Project

```
cd D:\MAD_Lab
flutter create lab12_firebase
cd lab12_firebase
```

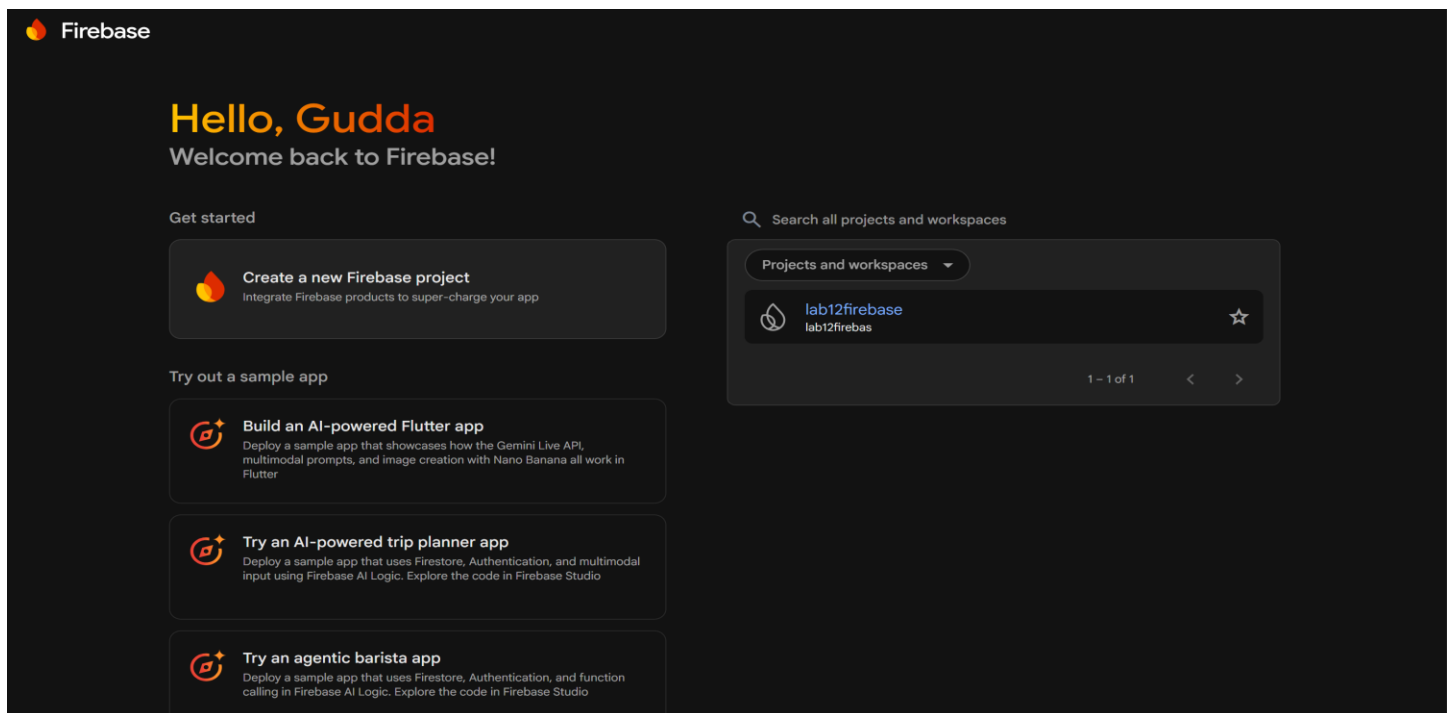

Open project in Visual Studio Code

STEP 2 : Enable Developer Mode

STEP 3 : Create Firebase Project

[Firebase Console](#)

STEP 4 : Create New Firebase Project

Create Project

Example name:

lab12firebase

STEP 5 : Add Android App

Click Android icon

Open:

android/app/src/main/AndroidManifest.xml

Find:

package="com.example.lab12_firebase"

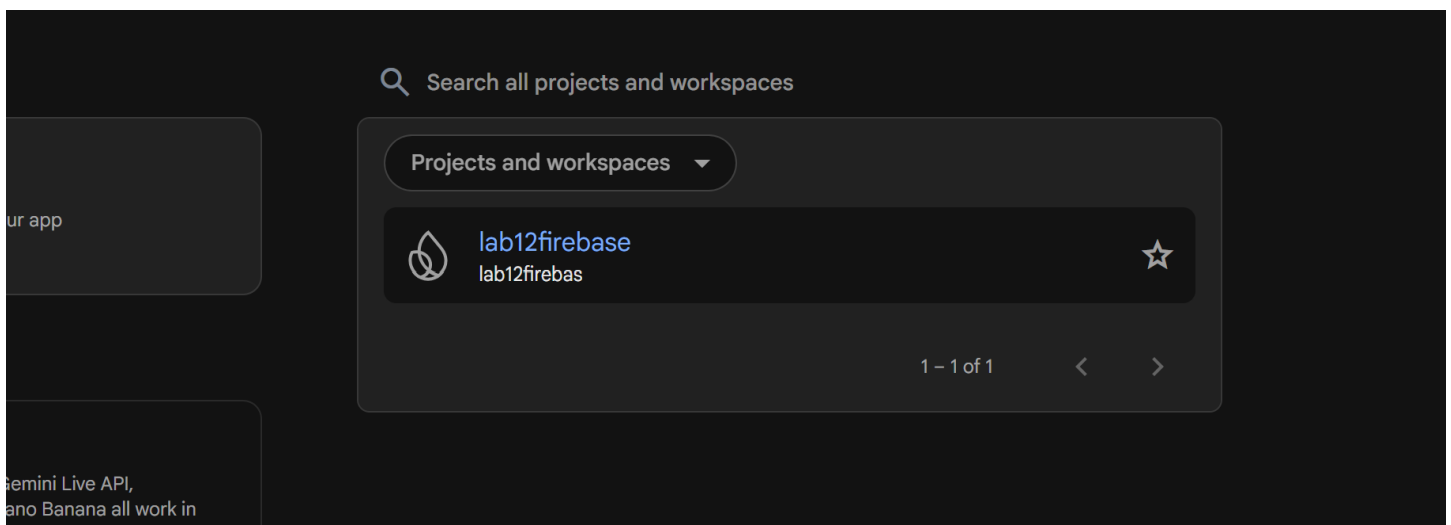

we will Copy package name.

Paste into Firebase.

App Nickname

Example:

Lab12

STEP 6 : Download google-services.json

Firebase gives file:

google-services.json

We will Download it.

Now paste it into:

```
lab12_firebase
├── android
│   └── app
│       └── google-services.json
```

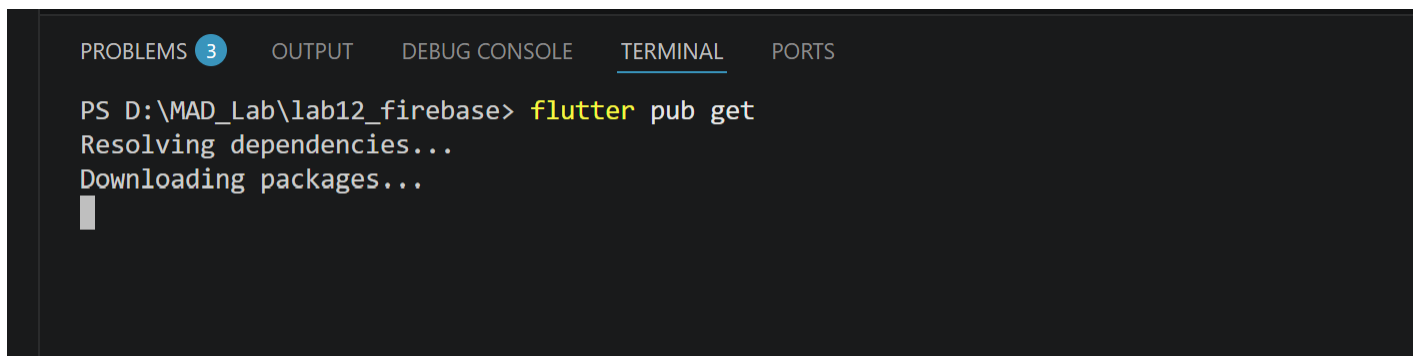

```
gs:gradle.kts
28 # the latest version available on pub.dev. To see which dependencies have newer
29 # versions available, run `flutter pub outdated`.
30 dependencies:
31   sdk: flutter
32
33   # The following adds the Cupertino Icons font to your application.
34   # Use with the CupertinoIcons class for iOS style icons.
35   cupertino_icons: ^1.0.8
36   firebase_core: ^3.13.0
37   firebase_auth: ^5.5.0
38   cloud_firestore: ^5.6.7
39   firebase_storage: ^12.4.5
40
41
42
```

STEP 8 : Install Packages

Run:

```
flutter pub get
```

```
PROBLEMS 3 OUTPUT DEBUG CONSOLE TERMINAL PORTS
PS D:\MAD_Lab\lab12_firebase> flutter pub get
Resolving dependencies...
Downloading packages...
█
```

STEP 9 : Configure Android Gradle

android/build.gradle.kts

```
1 plugins {
2     id("com.google.gms.google-services") version "4.4.2" apply false
3 }
4
5 allprojects {
6     repositories {
7         google()
8         mavenCentral()
9     }
10 }
11
12 val newBuildDir: Directory =
13     rootProject.layout.buildDirectory
14         .dir("../build")
15         .get()
16
17 rootProject.layout.buildDirectory.value(newBuildDir)
18
19 subprojects {
20     val newSubprojectBuildDir: Directory = newBuildDir.dir(project.name)
21     project.layout.buildDirectory.value(newSubprojectBuildDir)
22 }
23
24 subprojects {
25     project.evaluationDependsOn(":app")
26 }
27
28 tasks.register<Delete>("clean") {
29     delete(rootProject.layout.buildDirectory)
30 }
```

STEP 10 : Configure App Gradle

android/app/build.gradle.kts

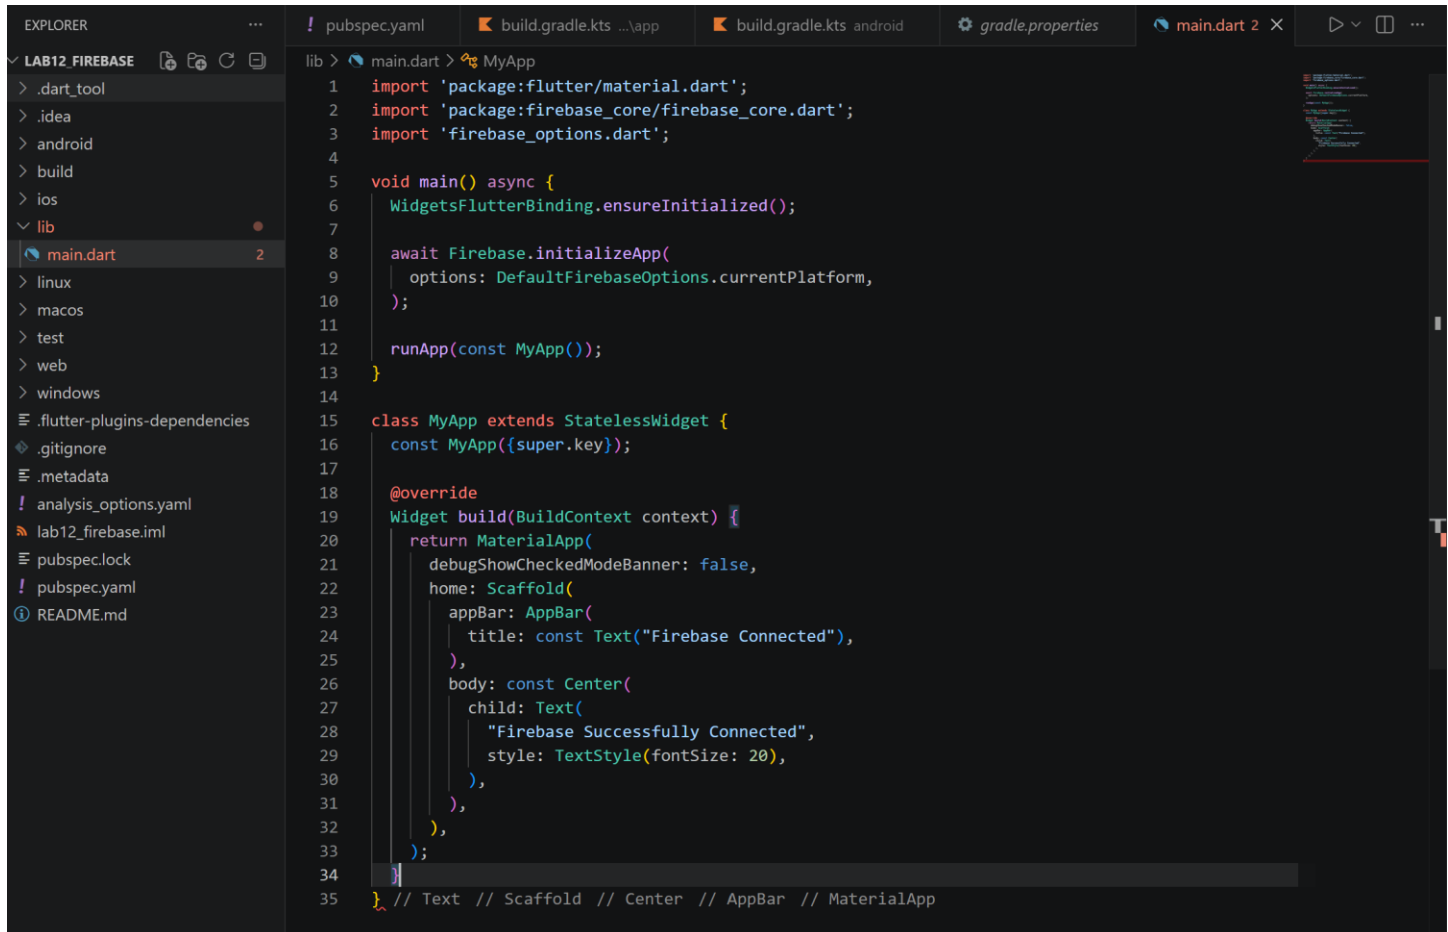

Add at bottom:

```
apply(plugin = "com.google.gms.google-services")
```

```
33
34 buildTypes {
35     release {
36         signingConfig = signingConfigs.getByName("debug")
37     }
38 }
39
40
41 flutter {
42     source = "../.."
43 }
44 apply(plugin = "com.google.gms.google-services")
```

STEP 11 : Initialize Firebase

lib/main.dart

```
1 import 'package:flutter/material.dart';
2 import 'package:firebase_core/firebase_core.dart';
3 import 'firebase_options.dart';
4
5 void main() async {
6   WidgetsFlutterBinding.ensureInitialized();
7
8   await Firebase.initializeApp(
9     options: DefaultFirebaseOptions.currentPlatform,
10  );
11
12  runApp(const MyApp());
13 }
14
15 class MyApp extends StatelessWidget {
16   const MyApp({super.key});
17
18   @override
19   Widget build(BuildContext context) {
20     return MaterialApp(
21       debugShowCheckedModeBanner: false,
22       home: Scaffold(
23         appBar: AppBar(
24           title: const Text("Firebase Connected"),
25         ),
26         body: const Center(
27           child: Text(
28             "Firebase Successfully Connected",
29             style: TextStyle(fontSize: 20),
30           ),
31         ),
32       ),
33     );
34   }
35 } // Text // Scaffold // Center // AppBar // MaterialApp
```

MAD - Lab

Lab #12

STEP 12 : Run App

```
flutter run -d chrome
```
